DETAILED ACTION

1. Claims 55-74 are presented for examination. Claims 55-74 are newly added.
2. The text of those sections of Title 35, USC code not included in this action can be found in the prior Office Action.
3. Claims 68-71 are objected to because the term “the network” in claims 68-69 appears to lack antecedent basis.

Claim Rejections - 35 USC § 102

4. Claims 55-58, 64-68 and 74 are rejected under 35 U.S.C. 102(e) as being anticipated by Chmaytelli[U.S. PGPub. 20020169977].
5. As to claims 55-56, Chmaytelli teaches the invention as claimed including: a method of configuring an access terminal [e.g., 100, Fig.2] in a network compliant with an IS-856 communication standard [paragraphs 6 and 62], the method comprising:
 6. sending information from an answering protocol process operating [e.g., 110, Fig.2; paragraphs 26-27, wherein the answering protocol process is part of an authentication process]

on the access terminal to a session configuration protocol process [130, Fig.2; paragraphs 32-33; wherein AT (130) is responsible for establishing a network session] operating on the access terminal, the information indicating that the answering protocol process requests a configuration change to change a condition of the access terminal [paragraph 23; i.e., sending out identity of the user is an indication of changing the device configuration]; and

7. performing the configuration change in response to receiving the information by the session configuration protocol process [e.g., Figs. 4-6; paragraphs 57-59].

8. As to claim 57, Chmaytelli further teaches that the answering protocol process comprises a protocol process responsible for changing a control channel of the access terminal, wherein the answering protocol process sends the information to the session configuration protocol process to trigger a change to the control channel of the access terminal [e.g., paragraph 37; i.e., changing different operating frequency].

9. As to claim 58, Chmaytelli further teaches that performing the configuration change includes sending a configuration request message from the session configuration protocol process operating on the access terminal to a corresponding peer of the session configuration protocol process in the network [e.g., paragraph 32].

10. As to claim 64, Chmaytelli further teaches that the information comprises a configuration request indication from the answering protocol process to the session configuration

protocol process informing the access terminal of an external event triggering a need to reconfigure a session of the access terminal [e.g., paragraph 57].

11. As to claims 65-68 and 74, since the features of these claims can also be found in claims 55-58, 64 and 69, they are rejected for the same reasons set forth in the rejection of claims 55-58, 64 and 69 above.

12. Claims 59-63 and 70-73 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

13. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

14. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
